---

**To Hiring Manager,**

Being a student of Software Engineering, I am interested to apply for Quality Assurance in your firm and I am willing to work from home. We studied a software testing course that got me interested in testing, in which we studied many testing tools on a basic. I have always been interested in how to manage a project development and how to test and assure the quality of a product developed. In addition to this, I have always been appreciated for my communication skills in my whole career. I believe that my proficient communication skills would be helpful enough to deal the customers and be at their support. My team leading skills and team working skills would be good for this position.

I am currently in the last semester of my BS Software engineering degree. I am doing my Final Year Project using MERN stack. I am leading my final year project team, their front-end developer and their QA analyst. I am writing automated test cases using mocha. I am skilled in testing and inspecting the web application according to the scope. Form past 6 months I have been practicing both manual and automated testing. I have been doing freelancing for about half a year. In that period, I have done countless other projects some little some big including website designing and graphic designing. I have done projects in different teams also I have managed few of the teams. I am skilled in many computer languages.

In these quarantine days, I am doing remote internship in graphic designing. I have designed application and websites. Doing this internship remotely helped me a lot to be comfortable with my skill and time management. My team lead has always appreciated me for submitting the assigned work at time and being active in online meetings. My experience with online working has so far been very good and I'm pretty confident that I would prove to be an active and punctual employee in this remote job too. In addition to this, I have personal preference for remote jobs too.

Following are the professional skill that I believe I excel in:

- Inspecting and testing the project according to its scope through both manual and automated testing.
- Documenting the needs of customer from raw point to well-managed technical document.
- Communicating and providing support to customers.
- Documenting production and defects.
- Managing the project development process.
- Designing application and websites.

My attached resume gives father details of my technical skills and specially the automated testing tools that I have so far worked on. I believe working at your firm will be a really great opportunity for me and will build great experience. I find this job position a golden opportunity for me. I won't claim that I have some rare exceptional skills that would make me suitable for this position, but I do claim that I would make the best of this opportunity. I therefore, look forward to joining your firm. I appreciated your effort for reviewing my credentials and experience.

Sincerely,  
Nabba Asif
